

## Helper functions

### button\_1\_count

- Counts number of times button 1 pressed
- Ends when button 2 is pressed

### operand\_input

- Calls button\_1\_count and returns that number
- Domain restricted to  $\mathbb{N}_{>0}$  currently.

### operator\_input

- Calls button\_1\_count and assigns operator:

0 = +

1 = −

2 = ×

3<sub>+</sub> = ÷

## Main function

```
1 | Operand_1 = operand_input()
2 | Operator = operator_input()
3 | Operand_2 = operand_input()
4 | Execute maths expression:    Operand_1 • Operand_2 =  $\mathcal{X}$ 
5 | Output result
```
